6th VoiceS-Conference:
European Teachers Network-"Get Connected"
Milano, 23-5-2019

The connective teacher: network learning for a sustainable profession

**Ellen van den Berg
Saxion University of Applied Sciences
The Netherlands**

'The times they are a-changing'

- Globalisation
- 4th Industrial revolution
- Climate change
- Expansion knowledge base teachers

Get connected

'To break down the walls of classroom isolation and convert teaching in a more *collaborative and collegial* profession'

Professional capital

$$PC = f(HC, SC, DC)$$

Human capital

Individual talent

Social capital

Resources available because of group membership

Decisional capital

Talent to make decisions in complex situations

Relation with practice

- Area of application
- Learning environment

Knowledge *for* practice

- Application of general knowledge in practice

Knowledge-*in*-practice

- Knowledge is a spin-off of practical action.
- Tacit/implicit knowledge

Knowledge *of* practice

- Anchored in practice and linked to more general knowledge
- Reflection-on-action.

Four dimensions social capital

- Structure
- Trust
- Access to expertise
- Content of information

Structure

- Tie span
 - limited-wider
- Tie strength:
 - social/emotional closeness x frequency of interaction

Trust

- Share information
 - Mutual understanding of roles
 - Alignment of expectations.
-
- Necessary condition to motivate people to discuss and share information and experiences

Access to expertise

- Knowing, acknowledging and accessibility of the participants of a network: *expertise transparency*

Content of interaction

- Substance of the conversations of the network participants: depth of interaction.
 - Storytelling
 - Aid and assistance
 - Sharing
 - Joint work

Learning within a networks

- Closed
- Open

Network learning: closed

- Informal character
 - Situated in context of practice
 - Sharing practical knowledge
 - Finding solutions for day-to-day problems
 - Confidential information
- ❖ Little opportunity for new ideas and expertise from outside

Network learning: open

- Variety of expertise and sources
- Many ideas
- ❖ Lacks the power of strong ties
 - Trust
 - Context-bound solutions

Learning between networks

- Boundary crossing: teachers 'hop' from one professional network to another.
- Friction triggers learning

Learning mechanisms of boundary crossing

- Identification
- Coordination
- Reflection
- Transformation

Identification

- Teachers recognise their own expertise and limitations.
- Part of multiple practices which challenges existing assumptions
- Legitimizing co-existence

Coordination

- Collaboration needs coordination: appointments, rules and procedures

Reflection

- Perspective making: making explicit one's own perspective
- Perspective taking: try to understand the others' viewpoints

Transformation

- Confrontation →
- Shared problem space→
- New practice!

Artefacts

- Actor-network theory: artefacts (objects) are also important
- Boundary objects facilitate communication between networks and enable the coordination of joint activities

Network institutes: Same learning mechanisms

- Identification
- Coordination
- Reflection
- Transformation

Decisional capital

- Reflection-in-action: The right decision at the right moment is key to quality teaching.
- Network and boundary crossing competencies

Connective teachers

- competent and passionate professionals, who seek for the best education for their students;
- innovative professionals who find a breeding ground for lifelong learning and innovation in physical and virtual networks;

- are linked to changes in the world and value cultural diversity.
